What is the mac? I'll chuck it on the wireless vlan which doesn't have any port restrictions

Can I get you to open port 5672 on the LAN? That appears to be stopping Farmbot from working on the LAN

Cheers,  
Rob

Ohh so the device that is normally wireless will be wired for testing?

It'll be for Farmbot when they get it reassembled (again 😞), so hopefully briefly on the LAN to sort and configure and then onto the wireless network where they can work out what's wrong with the adaptor/connection.

Cheers,  
Rob

**Subject:** RE: Activate network port - CAS-49810-Y5P5H7

Will it need to talk to wireless devices?

Hi Perrin,

Port is live and working perfectly. I'm happy to have it on the standard workstation vlan for the next few days but longer term I think it'll need to move over to the eduroam or a wireless vlan.

Cheers,  
Rob

Port should now be live, are you able to confirm? Also is this to go on the standard workstation vlan?
